The Lunar Module used in the Apollo Program to land American Astronauts on the moon, utilizes a controllable thrust Descent Engine, an Abort Guidance System and a Signal Data Demodulator, all developed and manufactured by TRW Systems Group, Redondo Beach, California. TRW Systems Group also provides major support to the Apollo Program in earth-lunar trajectory computations, world-wide communications through the Intelsat III Communications Satellite, Systems Engineering Support at the Houston Manned Space Center and Launch Support activities at the Cape Kennedy Space Flight Center.
